### **RCGP Impact from Research**

The RCGP has developed a new mechanism to support researchers to translate findings from academic primary care into tangible support and benefits for GPs. Through collaborations the RCGP will support research projects to translate findings into accessible information and resources that will benefit GPs and patients.

The RCGP offers:

- Relevant clinical guidance: a coal face GP to guide translation and dissemination
- Resources: e-Learning module(s), Toolkit(s), How to guide(s)
- Access to over 52,000 GPs via RCGP communication channels
- Regional and National events
- Existing collaborations with commissioners and policy makers
- Incorporating into existing RCGP resources
- Impacting research methodology best practice through the Research Ready portal

All RCGP activities will be accompanied by project management

### **Research at the RCGP**

The RCGP is a forward facing organisation with an emphasis on shaping the future of general practice and providing the highest quality patient care.

Research is key to the delivery of excellent care, and the RCGP is committed to supporting the impact and dissemination from research wherever possible; translating basic science discoveries into tangible benefits for GPs.

General practice is impacted by research at both a policy level and a practical level. At the RCGP we support increasing the evidence base for primary care practice as well as increasing research capacity in primary care through the Grants, Awards and Fellowships from the Scientific Foundation Board.
