

APEX Seminar Series

Professor Claire Hulme Professor of Health Economics, University of Exeter Medical School

Challenges for economic evaluation when doing research with people with learning disabilities: The OK Diabetes Study

There are around 1.2 million people in the UK with a mild or moderate learning disability. People with a learning disability have poorer health, experience delays in diagnosis and treatment, are more likely to have multiple health problems, poorer health outcomes and shorter life expectancy. Obesity and type 2 diabetes are common in this population.

This presentation reports on challenges during development and testing of data collection methods for use in an economic evaluation within a RCT for a manualised supported diabetes self-management programme for people with mild/moderate learning disabilities: The OK Diabetes Study.

Wednesday 16 October 2019

13.00-14.00

Venue: Room JS07, Smeall Building, St Luke's Campus

Join us from 12.30 in the downstairs lobby of Smeall for a sandwich lunch and informal networking
